**CCTVPTCAM
SMOKWIFI**

The CCTVPTCAM and SMOKWIFI are cloud based HD IP Cameras that can be easily configured for remote view in 3 simple steps:

1. Download and install 'P2PCam264' from App store or Android market
2. Click 'add camera' and scan QR Code (example below - actual QR code located at base of camera)
3. Name camera and type in camera password '888888'. Once saved, connect to camera

THAT'S IT!!!

SMOKWiFi
Configuration, PC CLIENT

Client allows simultaneous access to up to 4 cameras
Client allows access to SD Card recorded footage
Client allows Camera Configuration

1. To Access Camera and PC

- A) Ensure Camera is connected to WiFi (see Page 1)

3. To Access SD Card Recordings

- A) Stop/uncheck motion detect/IR first (error message will show if you do not and try to access recorded files)
- B) Right Click on Camera and select 'remote file'
- C) Select File, Right Click then select 'download video'
- D) Select a destination path and click 'New Recording'
- E) Green Status Bar indicates download. Item will show 'COMPLETED' at end of the listing when it has finished downloading.
- F) Select downloaded picture from destination folder. Double click to play

Note: If file shows up as .TMP and will not play, ensure steps from previous page (4) have been followed i.e start record has been selected. During download, the progress bar will not show green and the bottom left hand corner will display 'Download Cancelled' in red text.
